PROFESSIONAL SUMMARY

Software Engineer and full-stack developer with hands-on experience building browser extensions, microservices, CLI tools, and open-source contributions. Proficient in Rust, JavaScript/TypeScript, Node.js, and modern web technologies. Strong problem-solving skills developed through independent projects and industrial systems training. Passionate about creating practical developer tools and contributing to open-source ecosystems.

TECHNICAL SKILLS

Languages: Rust, JavaScript, TypeScript, Node.js, PHP (basic), Java (basic)

Frontend / Web: Svelte, HTML/CSS, Browser Extension APIs, Dynamic Script Injection

Backend & APIs: REST APIs, Express.js, Microservices Architecture, Authentication Systems

Databases & Tools: MySQL, MongoDB, Redis, Firebase, Git, Docker basics

Other: CLI Tool Development, Open-Source Contribution, Technical Documentation, Blockchain (Solana/Anchor learning)

PROFESSIONAL EXPERIENCE

Independent Software Developer | Self-Employed

June 2021 – Present | Lagos, Nigeria

- Designed and developed full-stack applications and developer tools independently, covering frontend, backend, authentication, and storage layers.
- Built and iterated on production-ready browser extensions and microservices with focus on usability, reliability, and clean architecture.
- Maintained active open-source presence through personal projects, tutorials, and contributions to external repositories.
- Explored emerging technologies including Solana blockchain development (Anchor framework) and continuous learning in TypeScript and modern frameworks.

CDS President – Financial Inclusion Group | National Youth Service Corps (NYSC)

May 2022 – January 2023 | Nsukka, Enugu State

- Led a team of corps members in planning and delivering community education initiatives on digital financial services.
- Coordinated stakeholder engagement, logistics, reporting, and documentation — demonstrating project ownership and communication skills transferable to engineering teams.

SELECTED PROJECTS

Voisascript – Browser Extension for Voice-Annotated Code

Tech: TypeScript, Svelte, Node.js, Microservices | github.com/jriffs

- Built a cross-platform browser extension that lets developers attach voice explanations to code and embed shareable audio links directly in GitHub comments.
- Architected supporting microservices for authentication and file/audio storage; implemented dynamic content script injection for seamless in-repo playback widgets.

Dapr Open-Source Contribution (js-sdk)

Tech: JavaScript | github.com/dapr/js-sdk (fork & contribution)

- Improved error handling by introducing structured error classes and enums, enhancing code maintainability and debugging clarity for the Dapr JavaScript SDK community.

Rust CLI Tools & Learning Projects

Tech: Rust | github.com/jriffs (first-file-explorer-project, guessing_game, first-cli-project)

- Developed multiple command-line applications including a file explorer and interactive games to deepen systems programming skills and memory-safe development practices.

100 Days of Solana / Anchor Framework

Tech: Rust, JavaScript, Solana, Anchor | Active learning & submissions

- Completing structured challenges and building Solana programs with the Anchor framework to gain practical blockchain and smart-contract development experience.

EDUCATION

Higher National Diploma (HND) in Statistics

Yaba College of Technology, Lagos | May 2015 – November 2020

Specialization: Econometrics / Economic Statistics

ADDITIONAL INFORMATION

Industrial Training: Mechatronics & Automation Trainee at Institute for Industrial Technology (IIT), Lagos (Nov 2025 – Present) — strengthened systems thinking, troubleshooting, and technical documentation skills.

Interests: Open-source collaboration, developer tooling, continuous learning, technical writing.
